

Henderson Streetscape Improvements

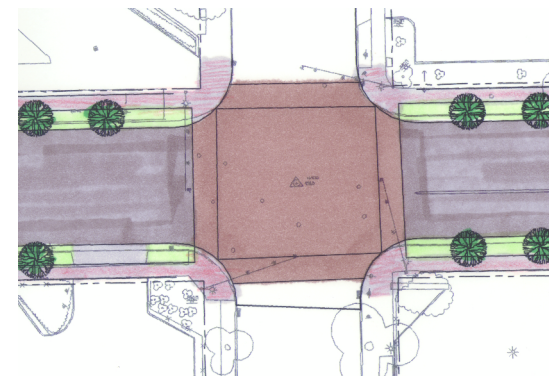

SeaTran, Station Area Planning, SoundTransit and Metro are collaborating on street improvements along Henderson Street between the light rail station and the Rainier Beach commercial district. Metro is currently working with SeaTran on permitting a Combined Sewer Overflow that will require some reconstruction of Henderson Street along the stretch that SoundTransit has committed to improve. Rather than allow Metro to reconstruct the street in its current configuration, we have moved forward with the design process to determine how they might contribute to the street improvements project while they are doing their construction work (rather than having to reconstruct the street twice). We've developed a conceptual layout of the street which responds to the Rainier Beach 2014 Neighborhood Plan, Station Area Planning efforts, and input from SeaTran in terms of sidewalk widths, landscaping, travel lanes and other issues. The concept allows for 16 foot sidewalk/planting strip, parking on both sides of the street, bike lanes, and one travel lane in each direction.

Metro CSO's zone of influence (not to scale)

Other improvements to be completed by SoundTransit
